Pollination to Plate: Teaching Pollination Systems Knowledge Through a Mobile App

The Pollination to Plate (P2P) mobile application teaches pollination systems thinking through a matching game. This mobile application targeted at ages 14-Adult, is available for free from iTunes and Android stores. The presentation will demo the application, its uses, and results of a recent research study exploring the impacts of the P2P app on undergraduate students' understanding of pollination processes and foods derived from pollination services.
